**ETOOS Comprehensive Study Material  
For NEET & AIIMS**

## DIGESTION AND ABSORPTION

*“Happiness: a good bank account, a good cook, and a good digestion”*

“JEAN-JACQUES ROUSSEAU (1712-1778)”

### INTRODUCTION

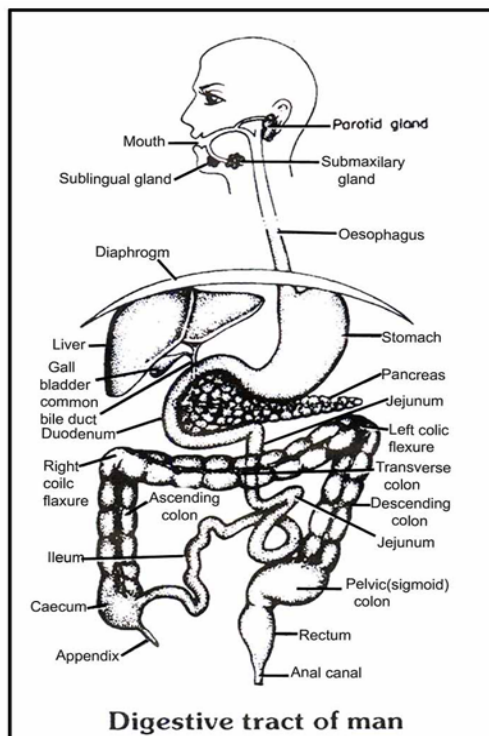

**F**ood is one of the basic requirements of all living organisms. The major and important component of our food are carbohydrates, proteins and fats. Vitamins and minerals are also required in small quantities. Bio-macromolecules in food cannot be utilized by our body in their original form. They have to be broken down and converted into simple substances in the digestive system. This process of conversion of complex food substances to simple absorbable forms is called digestion and is carried out by our digestive system by mechanical and biochemical methods.

The water we take in, plays an important role in the metabolic processes and also prevents dehydration of the body.

**DIGESTION & ABSORPTION****INTRODUCTION**

Food is one of the basic requirement of the living organisms. To perform various functions of the body energy is required, which is obtained from food. The process of conversion of complex food material into simple and diffusible forms by hydrolysis is termed as **Digestion**.

Major component of food are carbohydrates, proteins and fats, vitamins minerals are also required in small quantities.

The alimentary canal is tubular structure which extends from mouth to anus. It develops from ectoderm & endoderm.

Ectoderm – up to hard palate

Endoderm – from soft palate to rectum

Ectoderm – from anal canal to Anus

The alimentary canal is divided into following parts–

- (1) Mouth and Buccopharyngeal cavity, Pharynx
- (2) Oesophagus
- (3) Stomach
- (4) Intestine

**ETOOS KEY POINTS**

1. Spoil hay of Sweet clover (*Melilotus indica*) (Fodder and green manure) contains a substance called dicumarol. Dicumarol prevents the action of vitamin 'K'.
2. Non-secretion of HCl is called as achlorhydria condition.
3. Chalogogues are substances which cause the contraction of gall bladder.
4. Choloretic are substances which increase bile juice from liver.
5. "Achalasia Cardia" condition is characterized by failure of cardiac sphincter to relax completely on swallowing causing accumulation of food in oesophagus and proximal oesophagus dilates.
6. One pair of vomerine teeth is found in the palate of frog.
7. Fangs are the poison teeth of snakes, these are the maxillary teeth.
8. Upper incisor teeth are modified into tusk in elephant.
9. Upper canine teeth are modified into tusk in walrus.
10. Homodont type dentition are found in toothed whale.
11. Enamel is absent in sloth and Armadillo.
12. Salivary glands are absent in whale.
13. The tongue is non-motile in whale.
14. Gall bladder is absent in lemprey, whale, rat and horse.
15. The main pancreatic duct is also known as **duct of wirsung** while accessory pancreatic duct is known as **duct of santorini**.
16. Citrin is also known as vitamin 'P' and controls vascular permeability.
17. Vitamin B<sub>17</sub> – It is recently discovered anticancer vitamin.
18. Vitamin Q – helps in blood clotting.
19. Vita B<sub>15</sub> – It is also known as pogenic acid, deficiency causes disorder in liver.
20. Vitamin B<sub>6</sub> also used in the treatment of tuberculosis.
21. Thecodont teeth are also found in crocodile.

*Etoos Tips & Formulas*

- Biomacromolecules in food cannot be utilised by our body in their original form. They have been broken down and converted into simple substances in the digestive system. This process of conversion of complex food substances to simple absorbable forms is called digestion.
- No significant digestive activity occurs in the large intestine. “The functions of large intestine are
  - (a) absorption of some water, minerals and certain drugs.
  - (b) secretion of mucous, which helps on adhering the waste particles together and lubricating it for an easy passage.
- The undigested, unabsorbed substances called faeces enters into the caecum of large intestine through ileocaecal valve, which prevents the backflow of the faecal matter. It is temporarily stored in the rectum till defaecation.
- Absorption of digested product :
- Absorption is the process by which the end products of digestion pass through the intestinal mucosa into the blood or lymph.

#### 1. Disorders of digestive system :

- Jaundice : The liver is affected, skin and eyes turn yellow due to the deposit of bile pigments.
- Vomiting : It is the ejection of stomach contents through the mouth. This reflex action is controlled by the vomit centre in the medulla. A feeling of nausea precedes vomiting.
- Diarrhoea : The abnormal frequency of bowel movement and increased liquidity of the faecal discharge is known as diarrhoea. It reduces the absorption of food.
- Constipation : In constipation, the faeces are retained within the rectum as the bowel movements occur irregularly.
- Indigestion : In this condition, the food is not properly digested leading to a feeling of fullness. The causes of indigestion are inadequate enzyme secretion, anxiety, food poisoning, over eating and spicy food.
- When chyme enters into duodenum HCL of chyme stimulates different enteroendocrine cells of intestine to secrete following hormones.
  1. Secretin - 1st discovered hormone, stimulates pancreas to synthesise and secrete nonenzymatic part of pancreatic juice.
  2. Pancreozymin stimulates pancreas to synthesise and secrete enzymatic part of pancreatic juice.
  3. Hepatocinin stimulates liver cells for synthesis and secretion of bile juice.
  4. Cholecystokinin stimulates liver and Gall Bladder for secretion of bile juice.

**SOLVED EXAMPLE**

- Ex.1** In mammals the lower jaw is made up of  
 (A) Dentary (B) Maxilla  
 (C) Premaxilla (D) Palatine
- Sol.** (A) : The lower jaw of man is formed by the fusion of dentary bone only.
- Ex.2** The hardest substance of vertebrate body is  
 Or  
 Crown of teeth is covered by  
 (A) Keratin (B) Enamel  
 (C) Dentine (D) Chondrin
- Sol.** (B) : Crown of the teeth is covered by the hardest substance of the body called enamel
- Ex.3** In mammals the teeth are  
 (i) Of different types  
 (ii) Embedded in the cup-like socket of the jaw bones  
 (iii) Only two sets, present throughout life  
 These conditions are referred as  
 Or  
 Teeth of rabbits are  
 (A) Heterodont, thecodont and diphyodont  
 (B) Thecodont, heterodont and diphyodont  
 (C) Diphyodont, thecodont, and heterodont  
 (D) Heterodont, diphyodont and thecodont  
 (E) Thecodont, diphyodont and heterodont
- Sol.** (A)
- Ex.4** The mucosal layer in the stomach form irregular folds known as  
 (A) Villi  
 (B) Lumen  
 (C) Rugae  
 (D) Crypts of Lieberkuhn  
 (E) Lacteals
- Sol.** (C)
- Ex.5** Dental formula of human beings is  
 (A)  $I_2, C_2, P_1, M_3$  (B)  $I_2, C_1, P_2, M_3$   
 (C)  $I_3, C_1, P_2, M_2$  (D)  $I_2, C_2, P_3, M_1$
- Sol.** (B) : Dental formula of human is  

$$\frac{2, 1, 2, 3}{2, 1, 2, 3} = \frac{8}{8} \times 2 = 32$$
 . It shows the number of incisor 2, canine 1, premolar 2 molar 3 in each half upper and half lower jaw with 32 teeth in buccal cavity.
- Ex.6** The site of protein digestion is  
 Or  
 A rabbit eats a lot of gram, Then its digestion starts in  
 (A) Gullet (B) Stomach-Fat  
 (C) Small intestine-Protein (D) Mouth-Starch
- Sol.** (B) : The site of protein digestion is stomach where pepsin enzyme occur which changes protein to peptones + proteases.
- Ex.7** Which of the following statement is not correct  
 (A) Goblet cells are present in the mucosa of intestine and secrete mucus  
 (B) Oxyntic cells are present in the mucosa of stomach and secrete HCl  
 (C) Acini are present in the pancreas and secrete carboxypeptodase  
 (D) Brunner's glands are present in the submucosa of stomach and secrete pepsinogen
- Sol.** (D) : Brunner's glands are present in the submucosa of duodenum and secrete  $HCO_3^-$
- Ex.8** The predominant antibody in saliva is  
 (A) IgG (B) IgA  
 (C) IgM (D) IgD
- Sol.** (B)
- Ex.9** In man, Glisson's capsule is associated with the  
 (A) Digestive system  
 (B) Excretory system  
 (C) Nervous system  
 (D) Reproductive system  
 (E) Endocrine system
- Sol.** (A)
- Ex.10** Which of the following is the symptom of Ulcerative colitis  
 (A) Watery stools containing blood and mucus  
 (B) Difficulty in swallowing  
 (C) Loss of appetite  
 (D) Eyes turn yellow
- Sol.** (A)

**Exercise # 1****SINGLE OBJECTIVE****NEET LEVEL**

1. Bacteria entering with contaminated food are killed in stomach by –  
(A) Pepsin (B) Renin  
(C) Sodium bicarbonate (D) HCl
2. Glycogen is stored in –  
(A) Blood (B) Liver  
(C) Lungs (D) Kidney
3. Chymotrypsin is –  
(A) Proteolytic enzyme  
(B) Fat digestive Enzyme  
(C) Vitamin  
(D) Hormone
4. Excess amino acids are deaminated & converted into urea in –  
(A) Kidneys (B) Liver  
(C) Spleen (D) Pancreas
5. Secretin hormone is produced in –  
(A) Stomach and stimulates gastric glands  
(B) Intestine and stimulates Pancreatic glands  
(C) Liver and stimulates gall bladder  
(D) Intestine and stimulates crypts of lieberkuhn
6. Digestion of Carbohydrates, Proteins and fats completes in –  
(A) Stomach (B) Liver  
(C) Small intestine (D) Colon
7. Number of teeth which are monophyodont in man is  
(A) 4 (B) 22  
(C) 32 (D) 12
8. Absorption of digested food chiefly occurs in –  
(A) Stomach (B) Colon  
(C) Small Intestine (D) Large Intestine
9. Pancreatic juice takes part in digestion of –  
(A) Proteins Carbohydrate and fats  
(B) Proteins and fats  
(C) Protein, Carbohydrate  
(D) Proteins only
10. The enzyme trypsinogen is secreted by –  
(A) Duodenum (B) Pancreas  
(C) Liver (D) Stomach
11. Rickets is caused by the def. of –  
(A) Vit A (B) Vit C  
(C) Vit D (D) Vit B
12. Which is the sources of vitamin 'C' –  
(A) Banana (B) Potato  
(C) Orange (D) Mango
13. Our food mainly contains –  
(A) Carbohydrates (B) Cellulose  
(C) Sucrose (D) Glucose
14. Which one is differ from the category of other three  
(A) Gastrin (B) Glucagon  
(C) Secretin (D) Ptyalin
15. How many teeth in man grow twice in life–  
(A) 20 (B) 28  
(C) 30 (D) 32
26. The cells of the epithelial lining in the vertebrate stomach are not damaged by HCl because of –  
(A) Mucus secretion covering the epithelium  
(B) Neutrilization of HCl by alkaline gastric juice  
(C) HCl being to dilute  
(D) Crypts of Lieberkuhn
17. Stomach is the main site for the digestion of  
(A) Fats (B) Carbohydrate  
(C) Protein (D) All of these
18. The hormone involved in the discharge of pancreatic juice in mammal is called –  
(A) Gastrin (B) Secretin  
(C) Secretin & CCK (D) Enterogastrin
19. Function of HCl in stomach is to –  
(A) Kill micro-organism of food  
(B) Facilitate absorption of food  
(C) Dissolve enzymes secreted by gastric glands  
(D) Active trypsinogen to trypsin
20. Which is sweet in taste but is not sugar –  
(A) Starch (B) Saccharine  
(C) Lactose (D) Protein

**Exercise # 2**

**SINGLE OBJECTIVE**

**AIIMS LEVEL**

1. If a man is allowed to live exclusively on the diet of milk, egg & bread he would suffer from -  
 (A) Rickets (B) Beri-Beri  
 (C) Night blindness (D) Scurvey
2. Islets of langerhans are -  
 (A) Modified lymph glands  
 (B) Ductless glands in pancreas  
 (C) Specialized area in pituitary  
 (D) Small tubules in kidney
3. Scurvy is a disease caused by -  
 (A) A virus  
 (B) Deficiency of Vit E  
 (C) Def. of Vit. C  
 (D) Def. of Vit. D
4. Bilirubin and bilivirdin are found in -  
 (A) Blood (B) Bile  
 (C) Saliva (D) None of these
5. Vitamins are -  
 (A) Inorganic substances and can't be synthesised by animals.  
 (B) Inorganic substances and can be synthesised by animals.  
 (C) Organic substances which cannot mostly be synthesised by animals.  
 (D) Organic substances which can mostly be synthesised by animals.
6. Which of the following is the best source of Vit-A  
 (A) Carrot (B) Apple  
 (C) Peanuts (D) Honey
7. Vitamin necessary for blood clotting -  
 (A) A (B) E  
 (C) C (D) K
8. Dental formula of adult man is -  
 (A)  $\frac{2,1,2,3}{2,1,2,3}$  (B)  $\frac{2,1,2,3}{2,1,2,2}$   
 (C)  $\frac{2,1,2,3}{2,1,2,4}$  (D)  $\frac{2,1,3,2}{2,1,3,2}$
9. Islets of Langerhans are found in -  
 (A) Testis (B) Adrenal  
 (C) Pancreas (D) Ovary
10. Man needs carbohydrates as a source of energy and gets these from -  
 (A) Starch (B) Cellulose  
 (C) Both (D) None of these
11. To keep people healthy, strong and energetic and long lived, it is necessary to provide them -  
 (A) high energy food  
 (B) large amt. of food  
 (C) Balanced diet  
 (D) Initiative and spirit
12. Beri-Beri is caused due to -  
 (A) Def. of Vit B<sub>1</sub> (B) Def. of Vit B<sub>2</sub>  
 (C) Det. of Vit. B<sub>12</sub> (D) Def. of Vit C
13. Which one of these are most essential for body growth and formation of new cells -  
 (A) Sugar (B) Fats  
 (C) Nucleic acid (D) Protein
14. The most common concentrated source of proteins for vegetarians in our country is -  
 (A) Potatoes (B) Meat  
 (C) Eggs (D) Pulses
15. Casien present in milk, which is -  
 (A) Bacterium (B) Sugar  
 (C) Protein (D) Fat
16. The largest gland in human body is -  
 (A) Pancreas (B) Liver  
 (C) Thyroid (D) Pituitary
17. Sucrose is found in -  
 (A) Milk (B) Honey  
 (C) Sugarcane (D) Orange
18. Vit A from carotene is synthesised in -  
 (A) Spleen (B) Skin  
 (C) Pancreas (D) Liver

**Exercise # 3****PART - 1****MATRIX MATCH COLUMN**

1. Match Column - I with Column - II and select the correct option from the codes given below.
- |                                      |                                    |
|--------------------------------------|------------------------------------|
| <b>Column - I</b><br>(Types of cell) | <b>Column - II</b><br>(Secretions) |
| A. Peptic cells                      | i. Mucus                           |
| B. Oxyntic cells                     | ii. Alkaline fluid                 |
| C. Goblet cells                      | iii. Pro-enzymes                   |
|                                      | iv. HCl                            |
| (A) A-ii, B-i, C-iv                  | (B) A-iv, B-iii, C-ii              |
|                                      | (C) A-iv, B-i, C-ii                |
|                                      | (D) A-iii, B-iv, C-i               |
2. Match Column - I with Column - II and select the correct option from the codes given below.
- |                          |                            |
|--------------------------|----------------------------|
| <b>Column - I</b>        | <b>Column - II</b>         |
| A. Van Kupffer cells     | i. Islets of Langerhans    |
| B. $\beta$ -cells        | ii. Liver sinusoids        |
| C. Oxyntic cells         | iii. Thyroid gland         |
| D. Paneth cells          | iv. Stomach                |
|                          | v. Small intestine         |
| (A) A-iv, B-v, C-i, D-ii | (B) A-iii, B-i, C-iv, D-ii |
|                          | (C) A-iv, B-v, C-iii, D-i  |
|                          | (D) A-ii, B-i, C-iv, D-v   |
3. Match Column - I with Column - II and select the correct option from the codes given below.
- |                            |                            |
|----------------------------|----------------------------|
| <b>Column - I</b>          | <b>Column - II</b>         |
| A. Crypts of Lieberkuhn    | i. Loop of duodenum        |
| B. Pancreas                | ii. Stomach                |
| C. Adrenal gland           | iii. Intestine             |
| D. Gastric gland           | iv. Kidney                 |
| (A) A-iii, B-i, C-ii, D-iv | (B) A-iii, B-i, C-iv, D-ii |
|                            | (C) A-i, B-iii, C-iv, D-ii |
|                            | (D) A-iv, B-ii, C-iii, D-i |
4. Match Column - I with Column - II and select the correct option from the codes given below.
- |                            |                            |
|----------------------------|----------------------------|
| <b>Column - I</b>          | <b>Column - II</b>         |
| A. Goblet cells            | i. Antibacterial agent     |
| B. Lysozyme                | ii. Mucus                  |
| C. Saliva                  | iii. HCl                   |
| D. Oxyntic cells           | iv. Sublingual gland       |
| (A) A-iii, B-i, C-iv, D-ii | (B) A-i, B-iii, C-iv, D-ii |
|                            | (C) A-ii, B-iii, C-i, D-iv |
|                            | (D) A-ii, B-i, C-iv, D-iii |
5. Match Column - I with Column - II and select the correct option from the codes given below.
- |                                 |   |
|---------------------------------|---|
| <b>Column - I</b>               | <b>Column - II</b>                                    |
| A. Sphincter of ani internus    | i. Opening of hepato-pancreatic ampulla into duodenum |
| B. Cardiac sphincter            | ii. Between duodenum and posterior stomach            |
| C. Sphincter of Oddi            | iii. Guarding the terminal part of alimentary canal   |
| D. Ileocaecal sphincter         | iv. Between oesophagus and anterior stomach           |
| E. Pyloric sphincter            | v. Between small intestine and large intestine        |
| (A) A-iii, B-ii, C-iv, D-i, E-v | (B) A-ii, B-v, C-i, D-iv, E-iii                       |
|                                 | (C) A-iii, B-iv, C-i, D-v, E-ii                       |
|                                 | (D) A-iv, B-iii, C-i, D-ii, E-v                       |

**Exercise # 4**

**PART - 1**

**PREVIOUS YEAR (NEET/AIPMT)**

1. Which one of the following amino acids is an essential part of human diet? [CBSE AIPMT 2000]
 

(A) Glycine                      (B) Phenylalanine  
(C) Serine                        (D) Aspartic acid
2. In a person of advanced age, the hair becomes thinner gradually. It happens because of decrease in [CBSE AIPMT 2000]
 

(A) Synthesis of glucose  
(B) Synthesis of proteins  
(C) Energy availability  
(D) Blood supply
3. A certain person eats boiled potato; one of the food components in it is [CBSE AIPMT 2000]
 

(A) Lactose which is indigestible  
(B) Starch which does not get digested  
(C) Cellulose which is digested by intestinal cellulase  
(D) DNA which gets digested by pancreatic DNAase
4. Which one is correctly matched: - [CBSE AIPMT 2001]
 

(A) Vit. - E - Tocopherol  
(B) Vit. - D - Riboflavin  
(C) Vit. - B - Calciferole  
(D) Vit. - A - Thiamine
5. Stool of a person contains whitish grey colour due to malfunction of which type of organ: [CBSE AIPMT 2002]
 

(A) Pancreas                      (B) Spleen  
(C) Kidney                        (D) Liver
6. During prolonged fasting, in what sequence are the following organic compounds used up by the body: [CBSE AIPMT 2003]
 

(A) First carbohydrates, next proteins and lastly lipids  
(B) First proteins, next lipids and lastly carbohydrates  
(C) First carbohydrates, next fats and lastly proteins  
(D) First fats, next carbohydrates and lastly proteins
7. The richest sources of vitamin B<sub>12</sub> are: - [CBSE AIPMT 2004]
 

(A) Goat's liver and Spirulina  
(B) Chocolate and green gram  
(C) Rice and hen's egg  
(D) Carrot and chicken's breast
8. Which one of the following is the correct matching of a vitamin, its nature and its deficiency disease: [CBSE AIPMT 2004]
 

(A) Vitamin A - Fat soluble - Night blindness  
(B) Vitamin K - Fat soluble - Beri Beri  
(C) Vitamin A - Fat soluble - Beri Beri  
(D) Vitamin K - Water soluble - Pellagra
9. Duodenum has characteristic Brunner's glands which secrete two hormones called - [CBSE AIPMT 2004]
 

(A) Kinase, estrogen  
(B) Secretin, Cholecystokinin  
(C) Prolactin, parathormone  
(D) Estradiol, progesterone
10. Which one of the following pairs is not correctly matched: - [CBSE AIPMT 2005]
 

(A) Vitamin B<sub>12</sub> - Pernicious anaemia  
(B) Vitamin B<sub>1</sub> - Beri-beri  
(C) Vitamin C - Scurvy  
(D) Vitamin B<sub>2</sub> - Pellagra
11. Which group of three of the following five statements (a-e) contains all the three correct statements regarding beri-beri - [CBSE AIPMT 2005]
 

A. A crippling disease prevalent among the native population of sub-Saharan Africa.  
B. A deficiency disease caused by lack of thiamine (vitamin - B<sub>1</sub>).  
C. A nutritional disorder in infants and young children when the diet is persistently deficient in essential protein.  
D. Occurs in those countries where the staple diet is polished rice.  
E. The symptoms are pain from neuritis, paralysis, muscle wasting, progressive oedema, mental deterioration and finally heart failure.

(A) A, B and D                      (B) B, C and E  
(C) A, C and E                      (D) B, D and E

**MOCK TEST**

- Which one of the following vitamins is not fat soluble?  
(A) A (B) B (C) D (D) E
- The purplish red pigment rhodopsin contained in the rods type of photoreceptor cells of the human eye, is a derivative of  
(A) vitamin B<sub>1</sub> (B) vitamin C (C) vitamin D (D) vitamin A
- A balanced diet does not include  
(A) carbohydrates and fats (B) nucleic acids and enzymes  
(C) proteins and vitamins (D) minerals and salts
- Which of the following is true for vitamin C?  
(A) Also called as ascorbic acid (B) Also called as fumaric acid  
(C) Obtained from citrus fruits (D) Both (A) and (C)
- Which of the following guards the opening of hepatopancreatic duct into the duodenum?  
(A) Pyloric sphincter (B) Sphincter of Oddi  
(C) Semilunar valve (D) Ileocaecal valve
- In the stomach, gastric acid is secreted by the  
(A) peptic cells (B) acidic cells  
(C) gastrin secreting cells (D) parietal cells
- The primary dentition in human differs from permanent dentition in not having one of the following type of teeth.  
(A) Molars (B) Incisors (C) Canines (D) Premolars
- Choose the correct statement among the following.  
(A) The intestinal mucosal epithelium has oxyntic cells.  
(B) Ptyalin converts proteins into proteoses and peptones.  
(C) Crypts of Lieberkuhn is seen between the bases of villin in the intestine.  
(D) Sphincter of Oddi is present at the junction of oesophagus and cardiac stomach.  
(E) Goblet cells secrete hydrochloric acid in stomach.
- Column I contains names of the sphincter muscles of the alimentary canal and column II contains their locations. Match them properly and choose the correct answer.

Column I	Column II
A. Sphincter of ani internus	1. Opening of hepatopancreatic duct into duodenum
B. Cardiac sphincter	2. Between duodenum and posterior stomach
C. Sphincter of Oddi	3. Guarding the terminal part of alimentary canal
D. Ileocaecal sphincter	4. Between oesophagus and anterior stomach
E. Pyloric sphincter	5. Between small intestine and bowel

(A) A-3, B-2, C-4, D-1, E-5 (B) A-2, B-5, C-1, D-4, E-3  
(C) A-3, B-4, C-1, D-5, E-2 (D) A-4, B-3, C-1, D-2, E-5
- Identify the correctly matched structure and its secretion.  
(A) Brunner's gland - Salivary amylase (B) Intestinal mucosa - Insulin  
(C) Gall bladder - Bile (D) Salivary gland - Lysozyme  
(E) Goblet cells - HCl
